

PERSONAL CARE PROTECTED BY LOCK

SCA Hygiene Products is one of the world's largest players in personal care products and the global market leader in incontinence care products.

Their factory based in Gemerská Hôrka, Slovakia is responsible for the production of feminine care products, which includes pads and panty liners manufactured under the Bodyform brand for the UK market, Nuvenia for Italy, Nana for France and Libresse for the rest of Europe.

Light incontinence pads are also manufactured under the Tena brand (Tena Lady, Tena Men and Tena+) and sold across Europe. The total production for the Gemerská Hôrka factory is an incredible five billion units per year.

SCA is compliant with the highest quality standards and holds certificates for ISO 9001, OHSAS 18001 and British Retail Consortium (BRC) standards. This enables the company to work with leading retailers including Asda, Drogerie Markt, Rewe and Leclerc.

To comply with HACCP standards, SCA has installed metal detection on every production line. They decided to purchase 12 metal detectors from Lock Inspection Systems, including 6 high frequency detectors to optimise sensitivity on dry products.

Peter Helcman, QESH Manager commented, "We decided to work with Lock because of the high level of customer service support that their local agent, Datis Smart could deliver. Damian Svit is very responsive and provides an excellent level of customer care."

Presov based company owner Damian Svit established Datis Smart to provide premium quality control equipment and service support to the food, pharmaceutical and personal care industry. Product portfolio includes checkweighers from Packital, opto-electronic sorting from Radix, x-ray systems from InspX, TapTone packaging inspection systems and metal detection from Lock.
